## Assignment 1

```
r = int(input("radius of circle is ")) # user can input the radius of circle
A = 3.14*r*r                            # radius of circle formula
print("area is " , A)                   # printing out the radius of circle
```
